TIMER README

In this README you can find instructions on how to customize the timer in the quiz assignment.

CHANGING TIMER

Timer can be changed in an easy way based on the following steps:

1. Open the 'config.json' file.
2. Find 'questionTimer' field:
   - This represents the timer for each question in seconds.
3. Find 'totalQuizTime' field:
   - This represents the timer for the total quiz.
4. Modify the values of before mentioned fields.
   - Change values based on your preferences. For example, if you wish to have a limit of 8 seconds per question, set 'questionTimer' to 8. The same goes for 'totalQuizTime'.
5. Save the config.json file.
6. Run the application.
   - After running the application, the timer will now be updated.
